Question 1

1. c == a + b || !flag
   14 == 6 + 9 || !1
   14 == 15 || 0
   (14 == 15: false; 0: false)
   ∴ ado short circuit

2. a != 7 && flag || c >= 6
   6 != 7 && 1
   (6 != 7: true; 1: true; c >= 6: short circuited)
   ∴ short circuided c >= 6 not evaluated

3. !(b <= 12) && a % 2 == 0
   !(9 <= 12)
   !(true)
   (!(true): false; short circuited)
   ∴ short circuited a % 2 == 0 not evaluated

4. !(a > 5 || c < a + b)
   !(6 > 5 || 14 < 6 + 9)
   !(true)
   (!(true): false; short circuited)
   ∴ short circuited c < a + b not evaluated

innovate
